

The Struggle Behind My Portfolio Website

In the second semester at SMK N Tengeran, I was given an assignment by my teacher to create a personal portfolio website. At first, I thought it was just a simple task, something I could finish easily. However, it turned out to be one of the hardest challenges I have ever faced while learning coding.

When I started working on it, I immediately faced many problems. The code I wrote often had errors, and the website layout became messy. Every time I fixed one part, another part would break. I felt frustrated, lost my confidence, and almost gave up. I even closed my coding app on my phone because I was upset, but opened it again because I knew I had to finish it. In the end, I decided to ask AI for help, and slowly I began to find solutions and fix my mistakes.

The process was tiring and full of challenges, but I didn't stop. In the end, I successfully completed my portfolio website. When I saw the result, I felt very relieved and proud because I managed to get through all those difficulties.

From this experience, I learned that something that looks simple can become very difficult when you go through it. But as long as I don't give up and keep trying, I will be able to finish it.
